                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents DNA encoding a Corynebacterium glutamicum lysozyme insensitivity protein. This protein renders lysozyme sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum in which this protein is inactivated and which are therefore lysozyme sensitive. Corynebacterium glutamicum is used for the production of amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding Corynebacterium glutamicum lysozyme insensitivity protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New DNA molecule useful for production of amino acids encodes protein imparting lysozyme resistance to Corynebacterium glutamicum strain -

sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ή
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention provides a number of nucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yokoi
                                                                                                                                                                                                                                                                                                                                                                                                                       Coryneform bacterium; amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, messuring expression amount and from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, in the examplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ξ,

```
The present sequence is the total DNA sequence from cosmid clones IP(2)127 and LP(2)128, which contains a Streptomyces aureofaciens (ATCC 13899) DNA that encodes the proteins of the entire chlortetracycline biosynthetic pathway. The biosynthetic gene, which can be expressed in heterologous hosts, especially S. lividans, may be useful in the production of antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding tetracycline biosynthetic pathway proteins - specifically from Streptomyces aureofaciens for expression in heterologous hosts, specifically S. lividans

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genes encoding the blosynthetic production pathways of chlortetracycline, tetracycline, or their derivatives. One plasmid contains an origin of tetracycline, or their derivatives. One plasmid contains an origin of tetracycline, or their derivatives. One plasmid contains an origin of seplication, an actinonycete (such as Streptomyces Ilvidans, actinomycete active origin of replication and three or more tandem cohesive end sites. The second plasmid contains an actinomycete active origin of replication and three or more tandem cohesive end sites. The invention can be used to clone a large amount of genetic material for the heterologous production of the antibiotics, can be inserted into the plasmid allowing a biosynthetic pathway to be transferred in its entirety to a heterologous host. The invention specifically relates to cloning of the entire tetracycline and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ದ ದ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chlortetracycline from Streptomyces aureofaciens and its expression in heterologous host such as S. lividans. The present sequence represents S. aureofaciens DNA sequence from the cosmid clones designated LP2-127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   invention relates to combination of two plasmids for cloning the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Two plasmids for cloning the biosynthetic pathways of tetracycline, chlortetracycline, and their derivatives - comprise an origin of replication, cohesive end sites and optionally, an antibiotic

Bacteria signal to one another to coordinate expression of specific genes in a cell density dependent fashion. This "bacterial signalling" is called "quorum senasting and response". Quorum senasting allows a bacterial species to sense its own number and requiate gene expression according to species to sense its own number and requiate gene expression according to population density. The present sequence is an open reading frame (ORF) of a pseudomonas acruginosa quorum sensing signalling renders a bacterial population more susceptible to treatment. The present invention relates to a method for identifying modulators of quorum sensing signalling in Pseudomonas acruginosa bacteria. Modulators of quorum signalling may be used to treat P. acruginosa infections. P. acruginosa is an opportunistic pathogen of immunocompromised individuals (burn patients, cystic fibrosis patients, patients undergoing immunosuppressive therapy and patients with AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying modulators of quorum sensing signaling in Pseudomonas aeruginosa bacteria, useful for treating infections in immunocompromized patients -
                                                                                                                                                                                                                                                                                                                                     Quorum sensing; antibacterial; bacterial signalling; opportunistic pathogen; immunocompromised; burn; cystic fibrosis; immunosuppressive therapy; AIDS; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               208878
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 208913
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           209294
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the genomic sequence of pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41224 and the 3' end of this sequence overlaps with the 5' end of AAH41224 proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: This patent is in the same patent family as WO200055062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300001..349980

The present sequence represents the BLM (Bleomycin) gene cluster, containing open reading frames (ORES) 8-30. The proteins encoded by the gene cluster are useful for producing peptides and/or polyketide metabolites, especially bleomycin or bleomycin analogues. They are also useful for chemically modifying biological molecules to produce branched methyl groups, and for coupling amino acids and fatty acids. They may be reacted with an apo-carrier protein and coenzyme A to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazoline, bithiazoline and bithiazoline-containing microbial metabolites. The BLM gene cluster may also be used to produce

```
The invention provides polyketide-like synthesis (PKS)-like genes that

are used for the production of long chain poly-unsaturated fatty acid

(PUPA) productions. Genes responsible for elocaspentenoic acid (EPA)

production in Shewanella putrefaciens and novel genes associated with the

production of docosahexanoic acid (DHA) in vibrio marinus are used to

production of docosahexanoic acid (DHA) in vibrio marinus are used to

contents of PUPA production. The PKS-like genes associated with PUPA production. The PKS-like genes associated with PUPA production. The PKS-like genes are used to

contents of PUPA (specifically DHA and EPA). Oils from these plants are

useful as dietary supplements (in infant feeeding formulations, to give a

Contents of PUPA (specifically DHA and EPA). Oils from these plants are

useful as dietary supplements (in infant feeeding formulations, to give a

content of oser to that of human milk; for treating malnutition; in

intravenous feeding formulations; in cooking oils, fats etc.), also as

anti-inflammatory agents and for reducing cholesterol levels. Fragments

from the genes are useful as probes to isolate related molecules or to

detect organisms that express PKS-like genes. The methods facilitates

cantines suppressing interfering pathways. Expression of PUPA in

seeds allows simple recovery, as oil which can be engineered to have a

particular PUPA profile. Expression in microbes also allows simple

recovery and control of PUPA profile and is not subject to external

commission reading frames (DAB PKS-like genes) is and suppressing in the present sequence represents

commission of puPA profile and is not subject to external
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding polyketide-like synthesis enzymes of Vibrio marinus - and transformed plants and microbes that produce polyunsaturated fatty acids, useful as pharmaceuticals and food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 40138 BP; 11845 A; 7635 C; 8758 G; 11900 T; 0 other;

This invention describes novel DNA sequences encoding for polyketide (PK)-like synthesis (PKS-like) pathway genes from Shewanella, Vibrio and Schizochtrium. The nucleic acids are useful for isolating related molecules or in methods to detect organisms expressing the PKS-like genes. They are also useful for creating transgenic plants that express poly-unsaturated long chain fatty acids. The poly unsaturated long chain fatty acids a dietary supplements for patients undergoing intravenous feeding or for preventing or treating mainutition. The poly-unsaturated long chain fatty acids on also be moormal use the recipient receives a desired amount of poly-unsaturated in normal use the recipient receives a desired amount of poly-unsaturated long chain fatty acids. The nucleic acids are also useful in large scale long chain fatty acids. The nucleic acids are also useful in large scale modification of the fatty acid profile of host cells and edable plant tissues and/or plant parts. Transgenic production of polyunsaturated matural sources such as fish or plants. This sequence represents a nucleic matural sources such as fish or plants. This sequence represents a purple matural sources such as fish or plants. This sequence represents a purple of matural sources such as fish or plants. This sequence represents a purple of matural sources such as fish or plants. This sequence represents a property of the parts of the parts. The property of the parts incorporating the parts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 40138 BP; 11845 A; 7634 C; 8759 G; 11900 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11291 ATGTGCTCAATATTCGGAATTCTAGACATCAAATCAGACATTAAA..... 11247

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a DNA sequence encoding an icosapentaenoic acid-blosynthesising enzyme group-like protein group derived from a microbe having docosahexaenoic acid (DHA)productivity. The gene can be used for the industrial production of DHA. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                      Gene of a docosahexaenoic acid-producing microbe, used for industrial production of docosahexaenoic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 41587 BP; 12323 A; 7885 C; 9126 G; 12253 T; 0 other

/dev_stage="immature pods, ranging in age from 15 to 30 days after pollination" age from 15 to 30 days after pollination, were collected from greenhouse-grown plants. At harvest, seeds were removed from pods and included nitrogen. Pod walls were pooled from pods and in liquid nitrogen. Pod walls were pooled for mRNA extraction. CDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Glappack III Gold packaging extracts. Plasmids containing cDNA inserts were exised from the recombinant lambda-zap phage using Ex-assist helper phage and propogated in XLOLR cells."

/note="Vector: LambdaZAP; Site_1: ECORI; Site_2: Xhol; /note="Vector: LambdaZAP; Site_1: ECORI; Site_2: Xhol; Plants were grown in the greenhouse at the University of California, Riverside (Fenton, SJ Close, TJ Close). Whole spikes with awas prepared, poly(A) RNA was purfited.

). Total RNA was prepared, poly(A) RNA was purfited, one primary unamplified CDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) CDNA phagemids in the TJ Close lab at the University of California, Riverside (Choi). Phagemids were plated and picked at the Clemanon University Genomics Institute (CUCI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUCI (Wing, Yu, Frisch, Henry, Simmons, Oates , Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                                                                                                           Hordeum vulgare

Seeds were surface sterilized then germinated under axenic

conditions in the dark at room temperature on filter paper

with water, nystatin and cefotaxime in covered

crystallization dishes. Five-day old seedlings were

incubated at 50c for 2 days. Shoots were then harvested,

total RNA was prepared, poly(A) RNA was purified, one

primary unamplified cDNA library was made, and 600000 pfu

were in vivo excised to give pBluescript SK(-) cDNA

phagemids. These steps were performed in the TJ Close

laboratory at the University Genomics Institute (CUGI) (Begum,

RAIMER, Frisch, Atkins and Wing). Plasmid DNA preparations

DNA sequence has been trimmed to remove vector sequence

and contains a minimum of 100 bases of phred value 20 or

above. For more details on library preparation and

sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.genome.clemson.edu/projects/barley. University, The Netherlands). The CSTA libraries will attempt to capture the induction and initiation/initial growth of the tuber in an in vitro system as described in Bachem et al. (Plant Journal, 1996). Small microtubers develop from axillary buds attached to stem explants when placed on a high sucrose medium (10%). Visible morphological changes occur synchronously at day five in the axillary buds harvested on days 1-3. This targets of axillary buds harvested on days 1-3. This targets those genes involved in induction of the microtubers. The following libraries, CSTA (21-40) and CSTA (41-60), capture genes involved in tuber initiation and outgrowth. This library is noted as P3 in Tanksley lab notebooks."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         117

/note="Vector: Lambda Zap; Seedlings were exposed either
to 100 gy gamma or 0.5, 1, 5, or 10 kJ/m2 UV irradiation.
Gamma-irradiated samples were harvested at 6, 12, 24 and
48 hours after treatment. UV-irradiated samples were
harvested 24 hours post-treatment. cDNA was prepared from
polyA+ enriched, pooled samples of equivalent amounts of
total RNA from each sample. The cDNA was directionally
ligated into the Uni-Zap XR vector (Stratagene) and
packaged using the Gigapack III Gold packaging extracts.
Phagemids containing CDNA inserts were in vivo excised
from the recombinant Uni-ZAP XR vector using ExAssist
helper phage and the E. coli strain XLL Blue MRF.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          occiditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered interpaper crystallization dishes: Five-day old seedling shoots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluesscript SK-) CDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note-"Vector: lambda2AP; Site_1: EcoR1; Site_2: Xhol; Seeds were surface sterilized then germinated under axenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 seq_documentation_block:
LOCUS BF618750
DEFINITION HVSMEC0007K11f Hordeum vulgare seedling shoot EST 11brary
HVCDNA0003 (Etiolated and unstressed) Hordeum vulgare cDNA clone
HVSMEC0007K11f, mRNA sequence.

```

```
preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley. temperature on filter paper with water, nystatin and
cefotaxime in covered crystallization dishes. Roots were
harvested. The tissue, total RNA, and poly(A) RNA were
prepared, a cDNA library was made, and the cDNA clones
were in vivo excised to give pBluescript phagemids in the
TJ Close lab (Choi, Close, Fenton) at the University of
California, Riverside. Plasmid DNA preparations and DNA
sequencing were performed in the OD Anderson lab (all

    Patent No. 6140486
    GENERAL INFORMATION:
    TITLE OF INFORMATION:
    TITLE OF INFORMATION: Production of polyunsaturated fatty acids by expression
    TITLE OF INVENTION: of polyketide-like synthesis genes in plants
    FILE REFERENCE: CGNE.131.01US
